**JUSTIFICATION:**

The Alaska Board of Game and Federal Subsistence Board authorized a winter moose hunting season of up to 31 days in Unit 17A with a bag limit of up to two moose. A March 2017 aerial survey in Unit 17A resulted in an estimate corrected for sightability of 2,370 moose, ( $\pm 563$ ), well above our population objective of 800–1,200 moose in this unit. Composition surveys conducted in October 2017 revealed an estimated 77 bulls and 24.5 calves per 100 cows, which indicate surplus bulls available for harvest. Additional survey information from 2019 indicates the population continues to remain above objective. Allowing harvest for antlered and antlerless moose is important to lower moose density in this area, while providing additional harvest opportunity.
